

Stainless Steel Hexagon Socket Head Bolt

Standard: DIN912, ISO4762, GB/T70-2000, DIN7984

Material: SUS301,304,18/8,0Cr18Ni9,X5CrNi1810,X10Cr13,410S21, if you need to use other stainless steel, please let us know.

Heat Treatment: None for normal, If you have special hardness requirement, please let us know.

Surface Hardness: 220HV is Normal, 750HV max after Quench with SUS410

Finish: None.

Head: Hexagon Socket

Thread Direction: Normal is right hand/dextrorotation, if you want left hand, please let us know.

Tensile strength: 700N/mm²

Stainless Steel Hexagon Socket Head Bolt is a hex socket bolt, also known as the socket head cap bolt, is a headed and externally threaded part designed for insertion through a close tolerance internally tapped hole and mated with a nut. Tension on the hex socket bolt is induced by rotation of the bolt head. There is a hex socket in the head that accepts a hex wrench to tighten the socket head cap bolt. The point at the threaded end of the socket head cap bolt is machined flat so it will fit into a drilled hole.

"Stainless Steel" - With the addition of 12% chromium to iron, stainless steel is formed. The chromium protects the iron against most corrosion or red colored rust; thus the term "stainless steel". The ability of stainless to form a thin layer of protection on its outside surface, called a "passive film", is its most important characteristic in preventing corrosion.

"18-8" - 300 series stainless steel having approximately (not exactly) 18% chromium and 8% nickel. The term "18-8" is used interchangeably to characterize fasteners made of 302,302HQ,303,304,384, XM7, and other variables of these grades with close chemical compositions. There is little overall difference in corrosion resistance among the 18-8 types, but slight differences in chemical composition do make certain grades more resistant than others against particular chemicals or atmospheres.

Austenitic - Refers to 300 series stainless, the most popular of the stainless alloys accounting for 85%-90% of stainless fasteners sold Named for sir Robert Williams Austen, an English metallurgist, austenitic stainless is a crystal structure formed by heating steel, chromium, and nickel to a high temperature where it forms the characteristics of 300 series stainless steel.

The typical **Stainless Steel Hexagon Socket Head Bolt** as below

You can refer to below chart/list of Head/Thread ending

Thread Ending

And below is the common drawing for this kind:

Below chart show some typical dimensions of them, you can refer it, or you can change it for your own design, if you want know more standard dimensions of them , you can contact us.
